

# TEACHING CHILDREN IN THE (MIS)INFORMATION AGE

## Four Key Principles:

SEL    Communication    Language    Critical Thinking

### SEL

Social and Emotional Learning encourages students to empathise with others; fosters tolerance and respect.

Look out for SEAS! (Silence / Embarrassment / Avoidance of eye-contact / Silliness)

### Introducing the topic

### Discussion questions

- Start with a general question
- Ask personalised questions
- Use present tenses, e.g. *Imagine you are (poor). What do you do?*
- Use a VTR to jump start the discussion

### Visible Thinking Routines (Project Zero. Harvard University Graduate School of Education)

- See Think Wonder  
*What do you see?                  What do you think?                  What do you wonder?*
- Think Pair Share
- Question Starts
- I used to think... But now I think...

### Scaffolding the discussion

- Pre-teach vocabulary and phrases
- Provide multiple-choice options
- Model the discussion with the class (and recast where relevant)

- Use sentence starters and sentence frames
- Hang up posters with key language
- Display or hand out word banks
- Use graphic organisers

## Dynamics

pair work - small groups - large groups - whole class

Give students thinking time before discussing with a partner or in small groups. Then move towards larger groups or whole class feedback.

## Format of discussion questions

Display on whiteboard or screen / handouts for groups / online tool

## Follow up tasks

- Graphic organisers (for written tasks)
- Sentence frames (for opinions and conclusions)
- Posters or leaflets
- Research
- Role plays
- Community action
